PERFORMANCE / SPEED

# Your first successful setup

Work top to bottom. Complete each check before going live.

1

## Back up the website

Save files and database. Identify other cache or optimization plugins already active.

2

## Download the package

Log in at **aajtakdna.com** → My Account → Downloads and get your licensed CUSTOMER\_READY ZIP.

3

## Install in WordPress

Plugins → Add New → Upload Plugin → select ZIP → Install Now → Activate.

4

## Activate your license

Open the plugin License screen, enter the purchase-provided key and verify its status.

5

## Start with safe defaults

Review the dashboard first. Enable optional image, CDN or asset controls only when needed.

6

## Run a real-world check

Test a post, mobile layout, changed content and, if applicable, Cart / Checkout / My Account.

### Important for store owners

Do not assume an enabled payment gateway means orders and licensed digital delivery are verified. Use an appropriate safe end-to-end test before accepting live customers.

# A short go-live checklist

Use this page after activation and keep it for future updates.

## Verify success

- ✓ Plugin opens without errors.
- ✓ License state looks correct.
- ✓ Homepage & articles load.
- ✓ New edits appear after purge.
- ✓ Images and layout stay intact.
- ✓ Private/session routes stay private.
- ✓ Checkout completes in a safe test.

## If something breaks

### Old content?

Purge plugin + CDN cache.

### Broken layout?

Revert recent CSS/JS changes.

### Images missing?

Check processing, URLs, fallback.

### License failed?

Review key, URL, HTTPS, plan.

### Checkout issue?

Stop and check exclusions.

## Measure appropriately

Compare multiple Lighthouse runs, load times and visual stability. Do not assume fixed performance gains.

## Keep access secure

Never expose admin passwords, API secrets, gateway credentials or license keys in public logs/screenshots.

## Need assistance?

Official store: <https://aajtakdna.com>. Share version numbers, reproduction steps and non-sensitive diagnostics. Check the website for current support and plan terms.

Turbo Cache Pro v1.4.92 · Public quick start · 21 October 2026. Features and compatibility are environment-dependent. The exact v1.4.92 source has not been independently inspected for this document.
